EDUCATION

Umeå University

August 2023- November 2025

Master of Science in Molecular Biology (**120** ECTS)

Thesis: Potential Roles of the *gdf15-gfral* Stress Signaling Pathway in Larval Zebrafish Skin.

BRAC University

June 2021- July 2023

Master of Science in Biotechnology (**120** ECTS equivalent)

CGPA:3.62/4.00

Thesis: Isolation and Characterization of *Acinetobacter baumannii* from Environmental Surface Water in Dhaka City, Bangladesh.

North South University

January 2015 - August 2018

Bachelor of Science in Microbiology (**240** ECTS equivalent)

CGPA:3.85/4.00

Thesis: Comparative Genomics of *Burkholderia pseudomallei* Strains Isolated from Bangladesh.

TECHNICAL SKILLS

Microbiology: Bacterial isolation and identification; Bacterial transformation, Bacterial growth kinetics; Virulence profile assays (biofilm formation, serum resistance); Antimicrobial susceptibility testing (MIC and MBC); Plasmid isolation; Phage purification

Molecular Biology: DNA and RNA purification; PCR; RT-PCR; qPCR; Vector modification and cloning; mRNA library preparation; RNA probe generation; In situ hybridization; CRISPR protocols; Protein extraction; HPLC; SDS-PAGE; Western blot; ELISA; Immunochromatography

In vitro Model: Cell culture; Tissue transfection; Drug screening; Cell viability and clonogenic assays; Flow cytometry(AccuriTM C6 plus Flow Cytometer) ; Immunofluorescence microscopy

In vivo Model: Zebrafish husbandry and maintenance; Generation and genotyping of mutant lines; Phenotype analysis; Whole-mount in situ hybridization

Microscopy: Fluorescence (EVOS™ M5000) and Confocal microscopy (SP8 Leica, Nikon A1)

Genomics & Bioinformatics: Whole Genome Sequencing (WGS) assembly & annotation; RNA Sequencing (RNA-Seq); Differential expression analysis (DESeq2); Single-cell RNA-Seq (Seurat)

Protein Modeling: AlphaFold; HADDOCK; ClusPro; PyMOL

Data analysis & Statistics: RStudio (R); GraphPad Prism; SPSS; FCS Express; ImageJ/Fiji

RESEARCH EXPERIENCE

Master's Thesis Student, Umeå University

January 2025- June 2025

Thesis: Potential Roles of the *gdf15-gfral* Stress Signaling Pathway in Larval Zebrafish Skin.

- Examined lipopolysaccharide (LPS)-induced activation of skin goblet cells via the *gdf15-gfral* signaling pathway in larval zebrafish.
- Quantified skin goblet cell activation by measuring phosphorylated ERK (pERK) levels as a downstream signaling readout.
- Performed qPCR to quantify *gdf15* transcript expression following LPS induced immune stimulation.
- Demonstrated that CRISPR disruption of *gfral* significantly reduced LPS-induced pERK activation, confirming pathway-specific regulation of epithelial stress responses.

Advanced Project Student, Umeå University

August 2024- January 2025

Project: Analyzing the expression profile of *fh13* genes in Zebrafish development.

- Conducted a pilot study on the temporal and spatial expression of *fh13a* and *fh13b* during zebrafish development up to 5 dpf.
- Gene expression across developmental stages using qPCR showed high expression of *fh13a* compared to *fh13b*.
- Whole-mount in situ hybridization (WISH) showed notochord-specific expression of both *fh13a* and *fh13b* genes.
- Data showed a role for *fh13a* and *fh13b* in notochord and musculoskeletal development.

Tumor Biology Course Project, Umeå University

October 2023- December 2023

Project: Assessment of ISA-2011B as a prospective drug for ER⁺ breast cancer.

- Overexpressed PIP5K1 α in MCF-7 breast cancer cells via plasmid transfection and assessed its effect on pAKT levels using western blots.
- Evaluated anti-proliferative effects of ISA-2011B using MTS cell viability and clonogenic assays and determined dose-dependent inhibition with an IC₅₀ of ~47–64 μ M.
- Evaluated early and late apoptosis using Annexin V/PI staining and flow cytometry, demonstrating increased late apoptosis in ISA-2011B treated cells.
- Detected DNA damage response via immunofluorescence analysis of phospho-H2AX (Ser139) following ISA-2011B treatment.

Research Assistant, BRAC University

May 2022- July 2023

Project: Characterizing the dissemination of carbapenem resistance in *Escherichia coli*, *Klebsiella pneumoniae*, and *Acinetobacter baumannii* in hospital wastewater and hospital-adjacent community water of Dhaka, Bangladesh.

- Isolated and characterized bacterial strains from hospital wastewater and adjacent community water sources.
- Performed antimicrobial susceptibility testing (MIC, disc diffusion) on ~200 isolates to determine resistance profiles.
- Conducted PCR-based detection of carbapenemase and antimicrobial resistance genes.
- Presented findings in internal research seminars and collaborated with multidisciplinary research teams.
